Thank you for purchasing the Little Giant SAFEFRAME™ - the next generation of the Little Giant Ladder System. The new, patent-pending SafeFrame ladder was developed in partnership with construction and industrial safety professionals to prevent operators from standing on either the top step or top cap. Little Giant's unique Face-Forward™ top cap cradles the operators legs, encouraging the operator to face the front of the ladder while working rather than turning or twisting their body unsafely, and Little Giant's patent-pending Ground Cue™ bottom rung indicator trains the operator to feel and hear an audible alert reminding them that it is safe to dismount the ladder.

Please do not ignore the instructions! Make the most of your ladder system by learning how to use it safety. If you have any questions about how to operate your ladder system, please contact us toll free 800-453-1192 or by email customerservice@ladders.com. We value our customers and we're happy to help.
To open the ladder, separate the front half from the rear half.

Once completely separated, push down on the spreader arms to lock the ladder in its open position.

We have made the top step wider to make it more comfortable for the user.

We have removed the top step to prevent the user from climbing above the recommended height.

We have added comfort grooves to enhance your working experience.
Dry Lubricant that we suggest are: 1. Dupont 2. Tri-Flow 3. B'laster

Lay the ladder on its side to lubricate the bottom step.

Angle the spray can so you will be able to lubricate the “Thumper” located on the bottom sides of the bottom rung of the ladder. Once applied, clean off any excess lubricant.
